Divya Ratna Gautam

+91 9956189165 — vayugautam249@gmail.com — LinkedIn — LeetCode — GitHub

Summary

Software Engineering student with hands-on experience building full-stack applications, REST APIs, and LLM-powered systems. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, and Computer Networks. Experienced with Python, Java, JavaScript, React, FastAPI, Node.js, and SQL, with additional experience building RAG and LLM-based applications.

Education

Harcourt Butler Technical University, Kanpur September 2023 – Present
Bachelor of Technology in Information Technology (CGPA : 7.01)

Oxford Model Senior Secondary School, Kanpur CBSE
Senior Secondary (Class XII) – 81%

Oxford Model Senior Secondary School, Kanpur CBSE
Secondary (Class X) – 71%

Skills

Languages: Python, Java, JavaScript, SQL

Software Engineering: Data Structures & Algorithms, OOP, REST APIs, Debugging, Git/GitHub

Backend: FastAPI, Java

Frontend: React.js, HTML, CSS

Generative AI: LLMs, RAG, Prompt Engineering, Embeddings, Vector Search

Databases: MongoDB, MySQL

Fundamentals: DBMS, Operating Systems, Computer Networks

Projects

AI CodeReviewer – LLM-Powered GitHub Pull Request Analyzer GitHub — Live
Python, FastAPI, React, Groq API, GitHub REST API, Pydantic

- Built a full-stack code review application that retrieves GitHub pull requests, parses unified diffs, and presents structured code-review findings through a React frontend and FastAPI backend.
- Implemented a hybrid review pipeline combining deterministic code-quality checks with LLM-based analysis for logic, error-handling, performance, and maintainability issues.
- Used Pydantic models to validate LLM responses and added bounded retry handling to make the review pipeline more reliable when model output does not match the expected structure.
- Integrated the GitHub REST API to retrieve repository and pull-request data and designed the backend as modular API endpoints for review generation and result handling.

LearnMate AI – Full-Stack RAG Learning Platform GitHub — Live
React.js, Node.js, Express.js, MongoDB, JWT, Gemini API, Groq API

- Built a full-stack learning platform that processes uploaded study material and provides AI-powered chat, quiz, and flashcard experiences over the content.
- Implemented a document-processing and retrieval pipeline that splits uploaded content into chunks, generates embeddings, and retrieves relevant context using cosine similarity.
- Developed REST APIs with Node.js and Express.js for authentication, document processing, AI interactions, and user-specific learning data.
- Implemented JWT-based authentication and password hashing with bcrypt to protect user accounts and restricted authenticated resources through middleware.

Achievements

- **LeetCode Knight** – Solved 1,300+ DSA problems across competitive programming platforms; peak LeetCode rating: 2053.
- **CodeChef 3-Star** – Peak rating: 1650; participated in multiple competitive programming contests.
- **Smart India Hackathon 2025** – Selected among the top teams at the HBTU internal hackathon.
- **GATE 2026 (CS & IT)** – Score: 363; AIR: 25,584.
